

Lean Transformation Site Tours Put Your Team on the Front Lines of Lean in Action

Benefits of a Site Tour

- Energizes attendees, allowing them to see continuous improvement in action
- Presents a successful Lean environment in real time, at various levels of an organization
- Aligns your team and shows them what they're capable of achieving
- Develops a shared idea of what to expect and how to accomplish transformation

In the midst of your organization's Lean transformation, wouldn't it help to have your key leaders see what a lean organization looks like? Lean Transformation Site Tours do just that, overseeing structured, in-depth trips to organizations that are successfully reaping the benefits of their own Lean practices and allowing your leadership team to see it firsthand — at various organizational levels.

Our Site Tours take your team into the inner workings of a successful Lean organization, in both hospital and manufacturing settings. At each location, your leadership gets insight into best practices, tricks of the trade, and success stories. This unique and energizing experience to learn from advanced Lean practitioners and to reflect on how to apply these principles to your organization can be the key to your successful Lean transformation.

How the Site Tours Work

Led by our own highly experienced Lean experts, the trips follow a proven structure, taking your leadership team to the campuses of hospitals and other organizations that have successfully implemented Lean principles. At these best-in-class organizations, your team will examine what Lean accomplishment looks like through onsite assessment. The curriculum explores how these organizations use key Lean elements to achieve operating success, before turning the focus to reviewing how the design elements were implemented, how the elements relate to an organization's daily management system, and how those practices can be replicated as part of your own Lean makeover.

Who Should Attend a Site Tour?

Tours are designed for all levels of leaders within your organization, from executive and senior leaders to those responsible for certain elements of your organization's Lean transformation or other key segments of the value stream. While this learning experience will be a hands-on intensive on Lean principles in action, attendees should already have some formal Lean training under their belts. Prerequisite training and/or experience for attendees should be in the following:

- Lean leader training or equivalent
- Waste identification and NVA and VA analysis
- Standardized work and cycle time or takt time
- Understanding of "Respect for People"
- Strategy Deployment and Daily Management

Management Systems for the Lean Enterprise

March 27-29, 2017

Site Tour Objectives

1. Understand how Toyota based management systems are fundamental for the success of a lean enterprise.
2. Observe first-hand how different organizations utilize these powerful management systems to achieve success.
3. Develop action plans to transfer site tour lessons learned to participating organizations.
